paylater

Dear applicant,

Welcome to the arise coding challenge!

You have until the 11th of February to complete the challenge.

Please follow the steps on the next page to complete the challenge.

# Software to Install and Repo

## Anaconda

Please download Anaconda from [here](#), install the version for Python 2.7.

The reason we are installing Anaconda for Python 2.7 is because Python 2.7 is required to install Google Cloud SDK.

## Cloud SDK

Please download and install Google Cloud SDK from [here](#). Once downloaded and installed, you will need to initialize SDK.

The Project ID you need to use is: **propane-highway-202915**

The Repository you need to clone is: **Arise-Applicants**

A repository is cloned using the following command in your terminal:  
gcloud source repos clone [Repository Name]--[Project ID]

# Coding Steps

## STEP 1

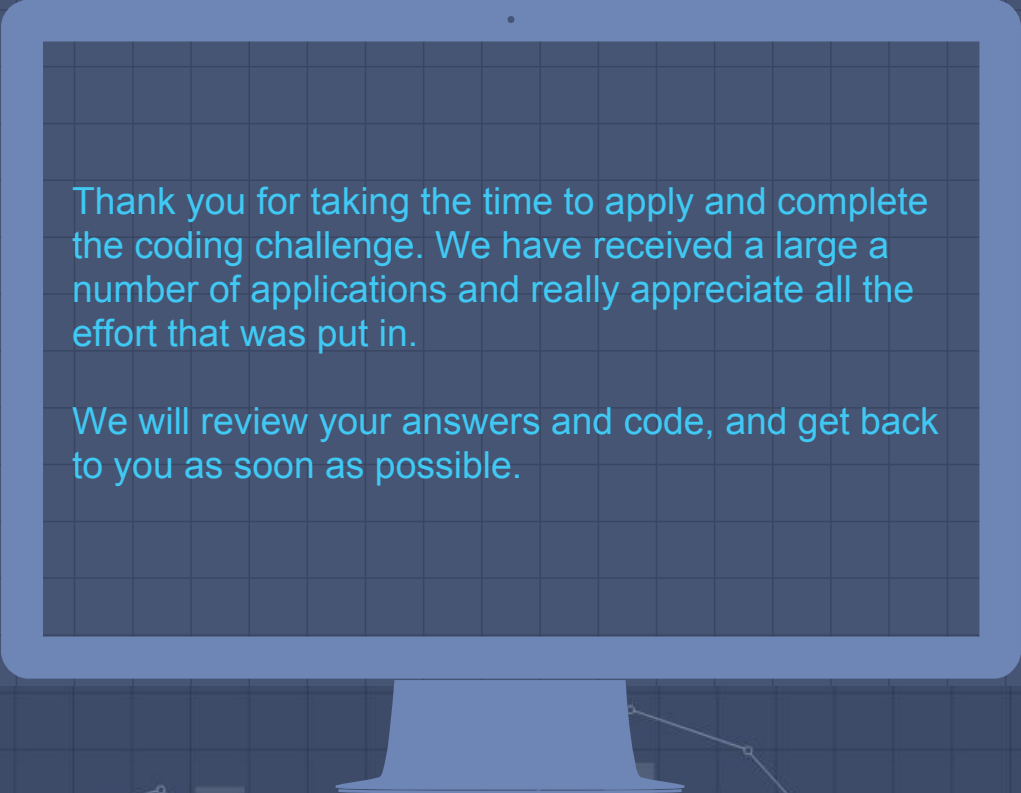

Once you have cloned the **Arise-Applicants** repository, please open the ``arise_application.ipynb`` notebook using Jupyter Notebook. This can be done from the command line.

## STEP 2

Please complete all the questions in the ``arise_application.ipynb`` notebook and submit the necessary answers in the arise Challenge Answer Form [here](#).

## STEP 3

Please ensure that you attach your complete notebook to the Challenge Answer Form. Please rename your notebook using the following formation ``your_email_address.ipynb``.

Thank you for taking the time to apply and complete the coding challenge. We have received a large number of applications and really appreciate all the effort that was put in.

We will review your answers and code, and get back to you as soon as possible.
